1. Project Title

Tandikan Services Booking System

2. Project Description

The Tandikan Services Booking System is a web-based platform designed to simplify the process of requesting and managing home services. The system allows customers to book services online, workers to manage assigned jobs, and administrators to oversee the entire operation through a centralized dashboard.

The project was developed using HTML, CSS, and JavaScript with LocalStorage for data management. The system provides role-based access for customers, workers, and administrators.

3. Objectives

General Objective

To develop a web-based booking management system that streamlines the process of requesting, assigning, and managing household services.

Specific Objectives

1. To provide an online booking platform for customers.
2. To allow administrators to manage bookings and workers efficiently.
3. To enable workers to view and manage assigned jobs.
4. To track booking statuses and payment statuses.
5. To improve service management through a centralized system.

4. Scope of the Project

The system focuses on service booking and workforce management for household services.

The system includes:

- Customer Registration and Login
- Service Booking
- Booking History
- Worker Application System
- Worker Management
- Job Assignment
- Payment Tracking
- Status Monitoring
- Location Mapping

The system does not include:

- Online Payment Processing
- SMS Notifications
- Email Notifications
- Cloud Database Integration

5. Technologies Used

Front-End Technologies

- HTML5
- CSS3
- JavaScript (ES6)

Storage Technology

- Browser LocalStorage

Mapping Technology

- map.js(Leaflet.js)
- OpenStreetMap

Development Environment

- Visual Studio Code
- Live Server Extension

6. System Users

Customer

Customers can:

- Register an account
- Login to the system
- Book services
- View booking history
- Track booking status
- Apply as a worker

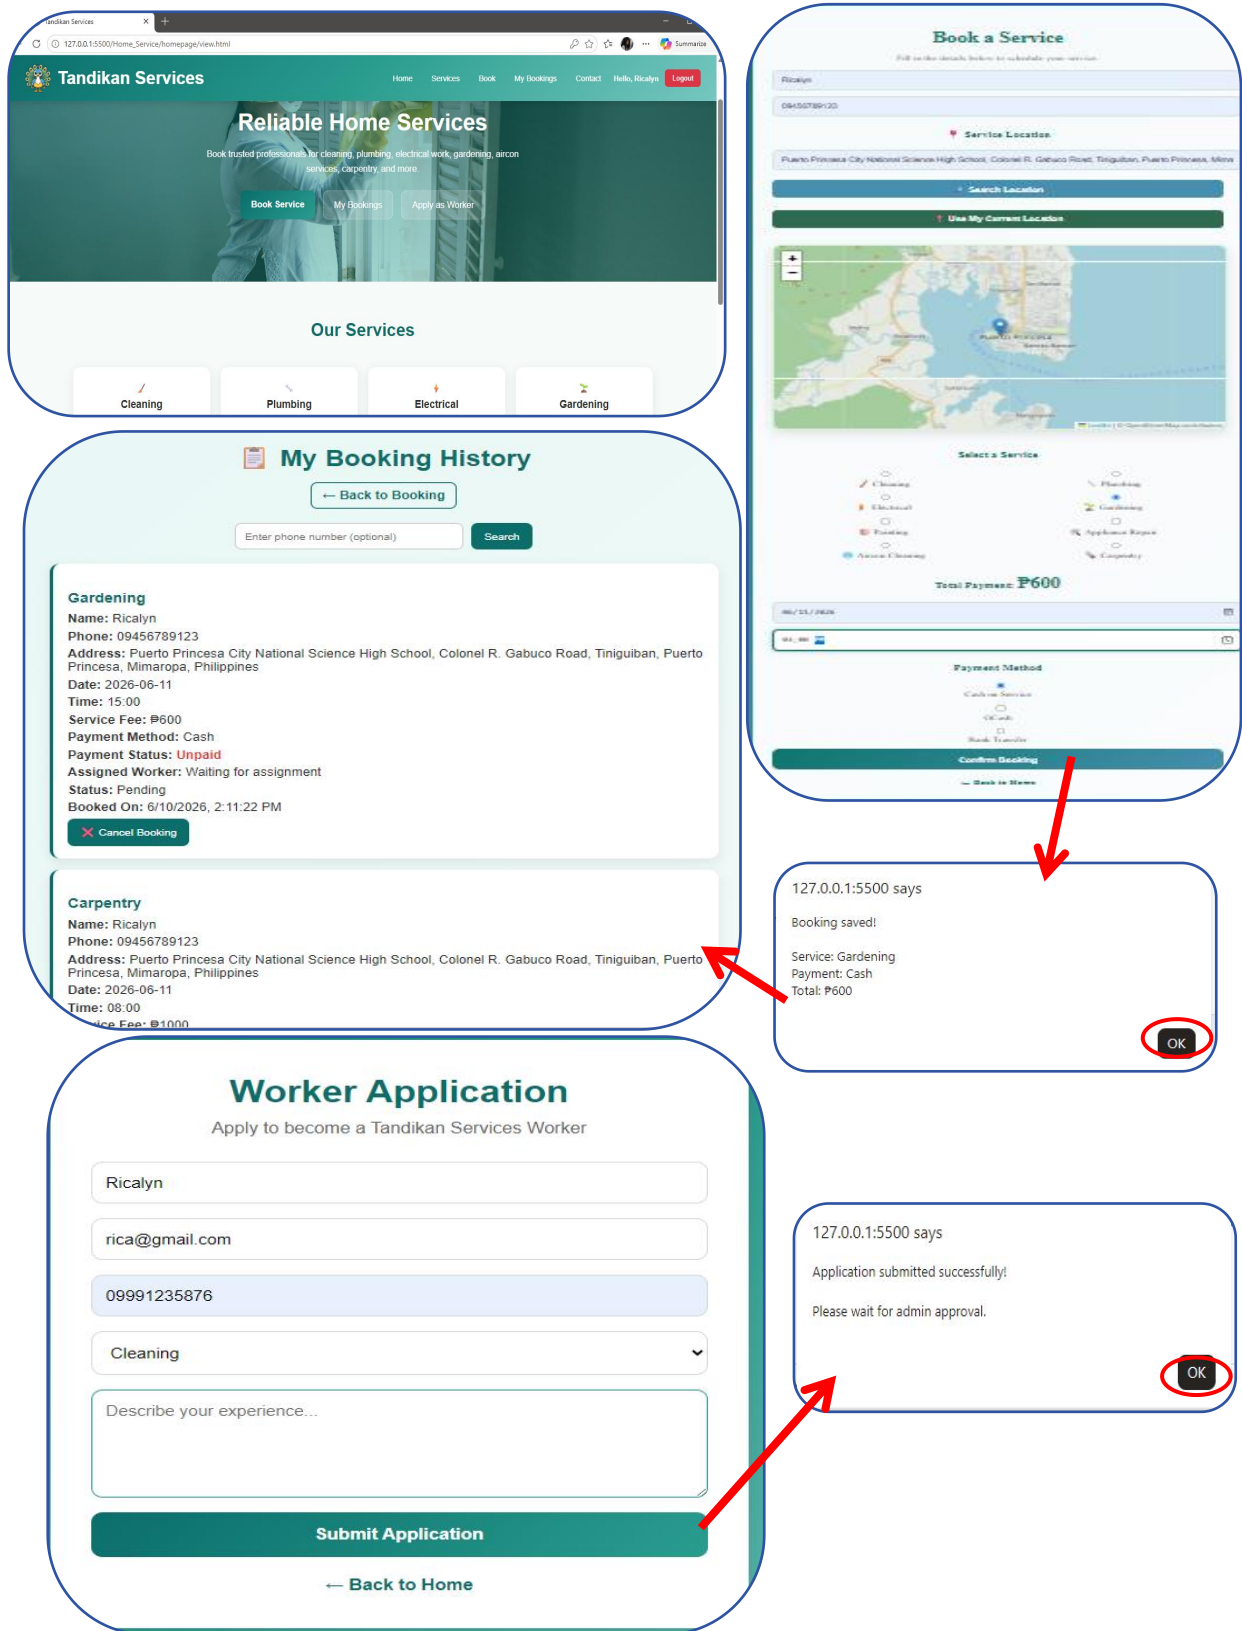

Figure 1: Users Dashboards; Booking, Booking History, And Apply as a Worker.

Worker

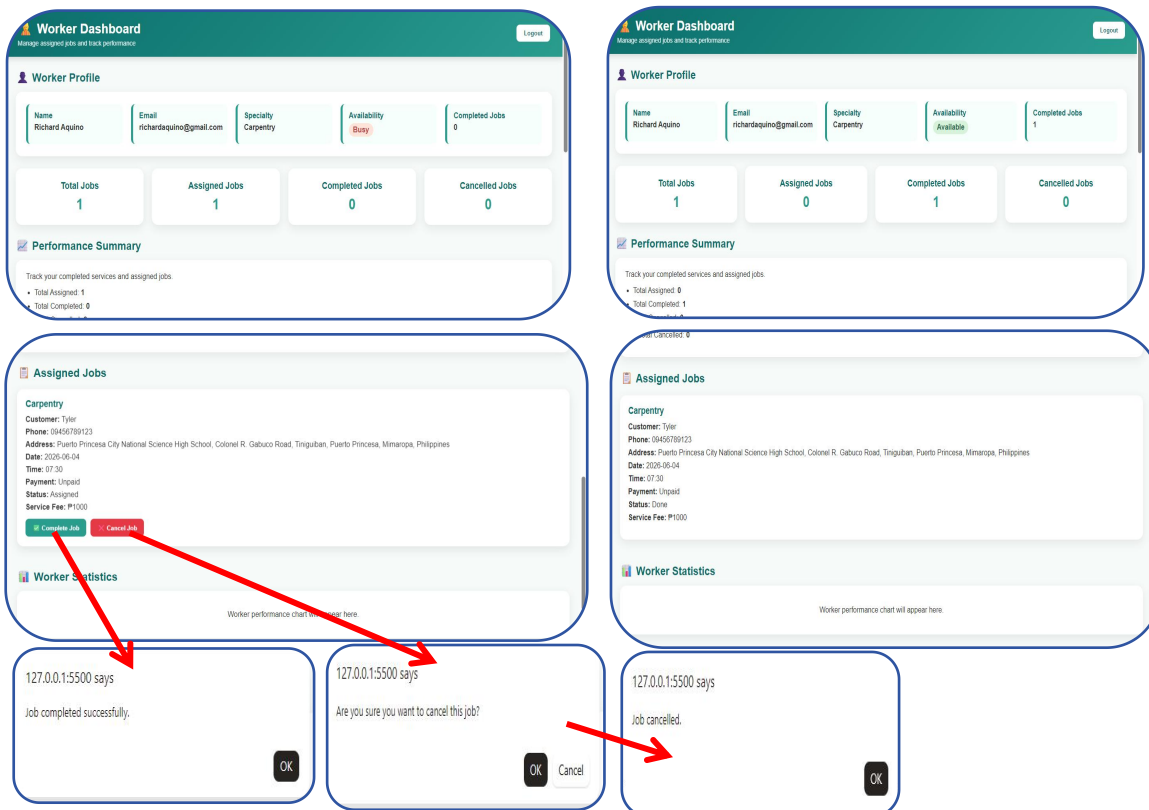

Workers can:

- Login to the worker portal
- View assigned jobs
- Complete assigned jobs
- Cancel assigned jobs
- View job statistics

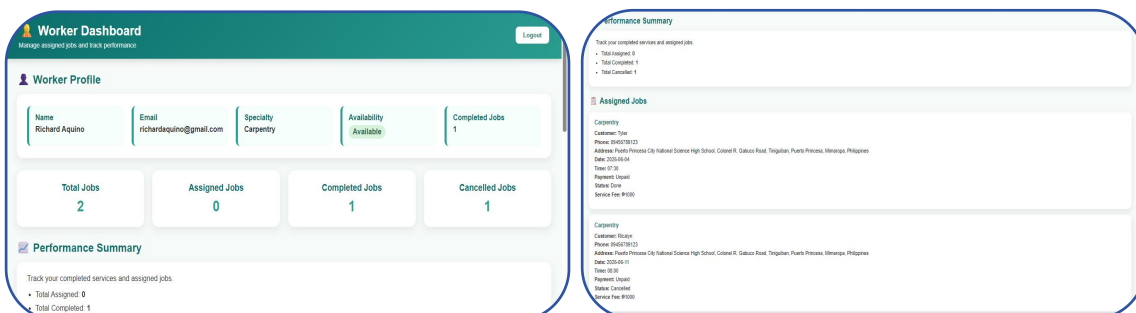

Figure 2: Workers Dashboards; complete job & cancel job.

Before

After Job Completed

After Job Cancelled

Administrator

Administrators can:

- Manage bookings
- Manage workers
- Approve worker applications
- Assign workers
- Update booking statuses
- Update payment statuses
- Monitor system activities

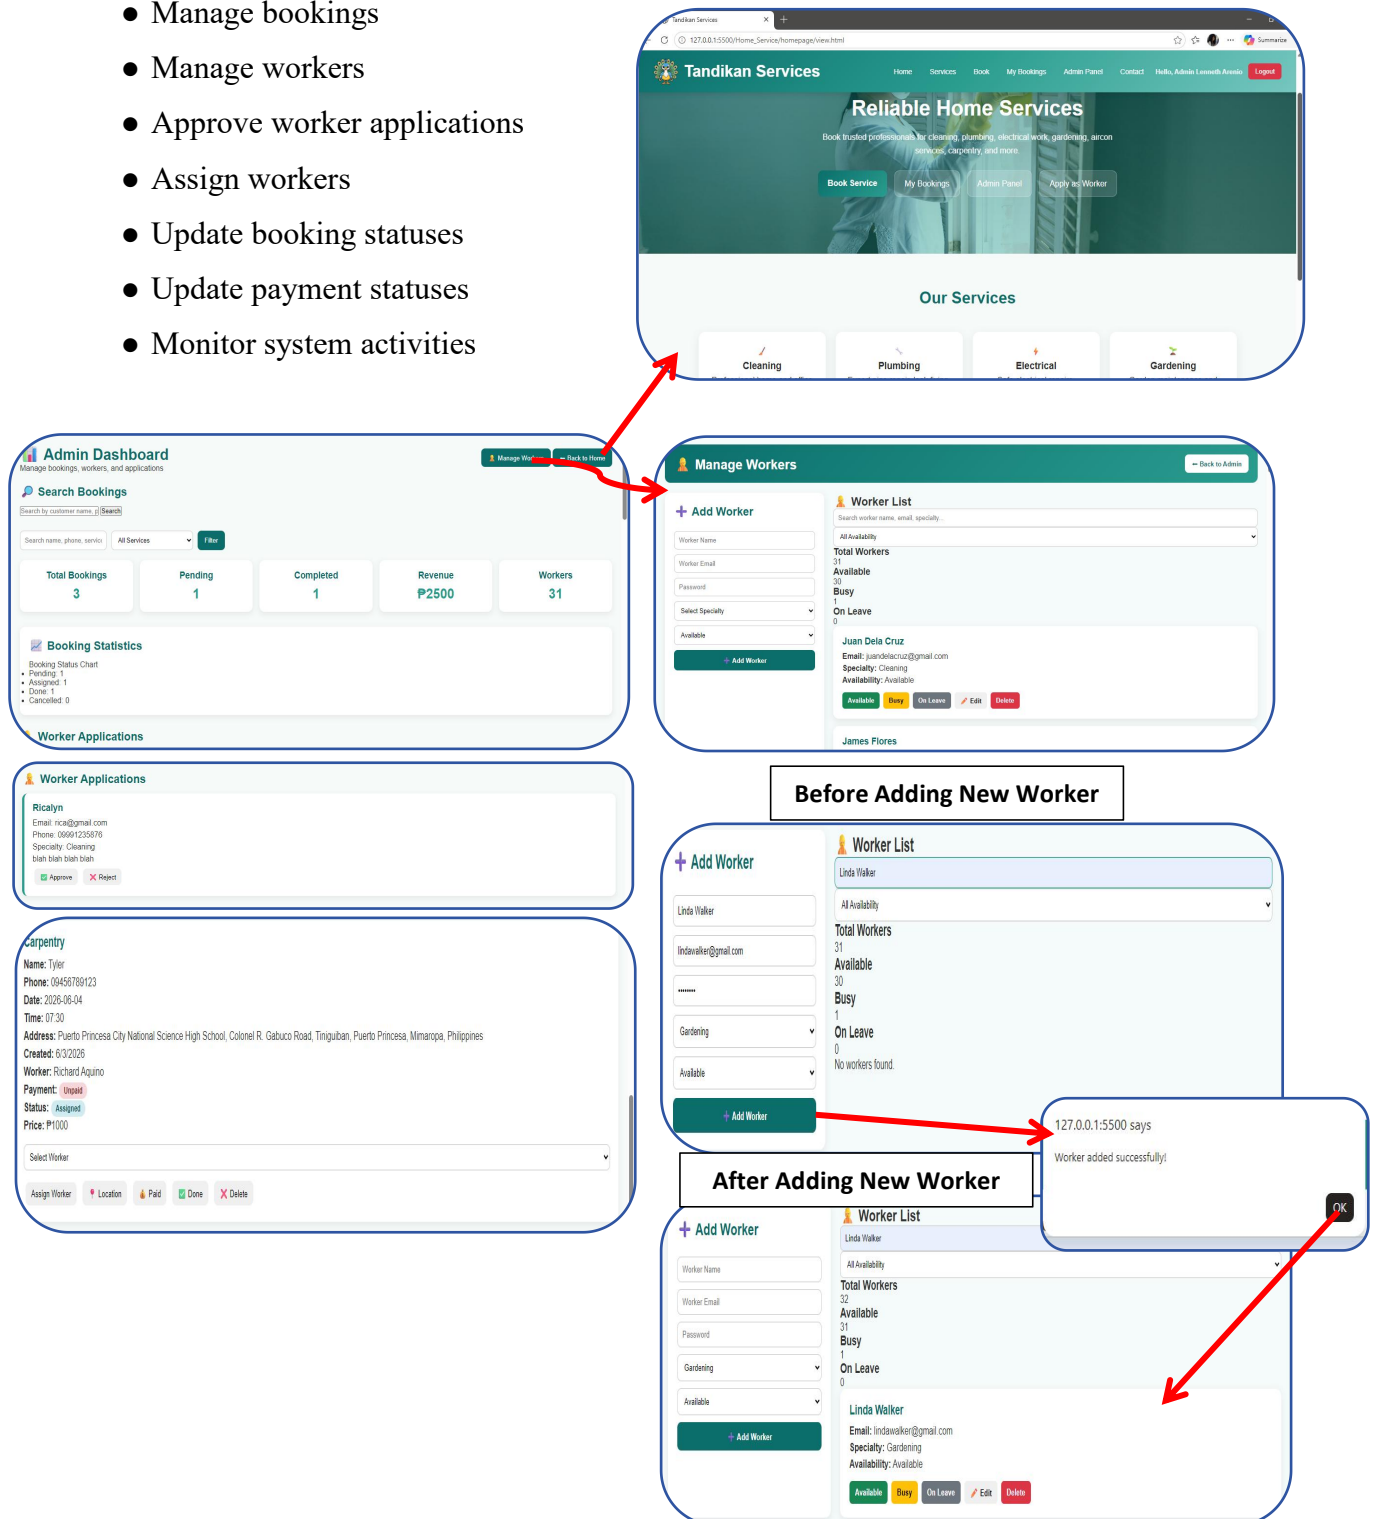

Figure 3: Admin Panel; Homepage, Manage Worker, Assign worker, & Add New Workers

7. Services Offered

The system currently supports the following services:

1. Cleaning
2. Plumbing
3. Electrical
4. Gardening
5. Painting
6. Appliance Repair
7. Aircon Cleaning
8. Carpentry

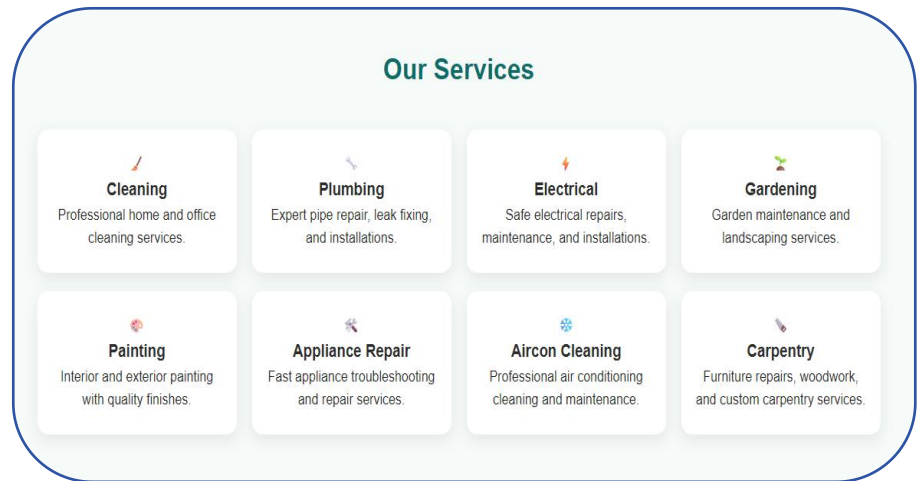

Figure 4: Services Offered.

8. System Features

Authentication Module

Provides secure login and registration functionality for customers and workers.

Features:

- User Registration
- User Login
- Worker Login
- Logout Functionality
- Role-Based Access Control

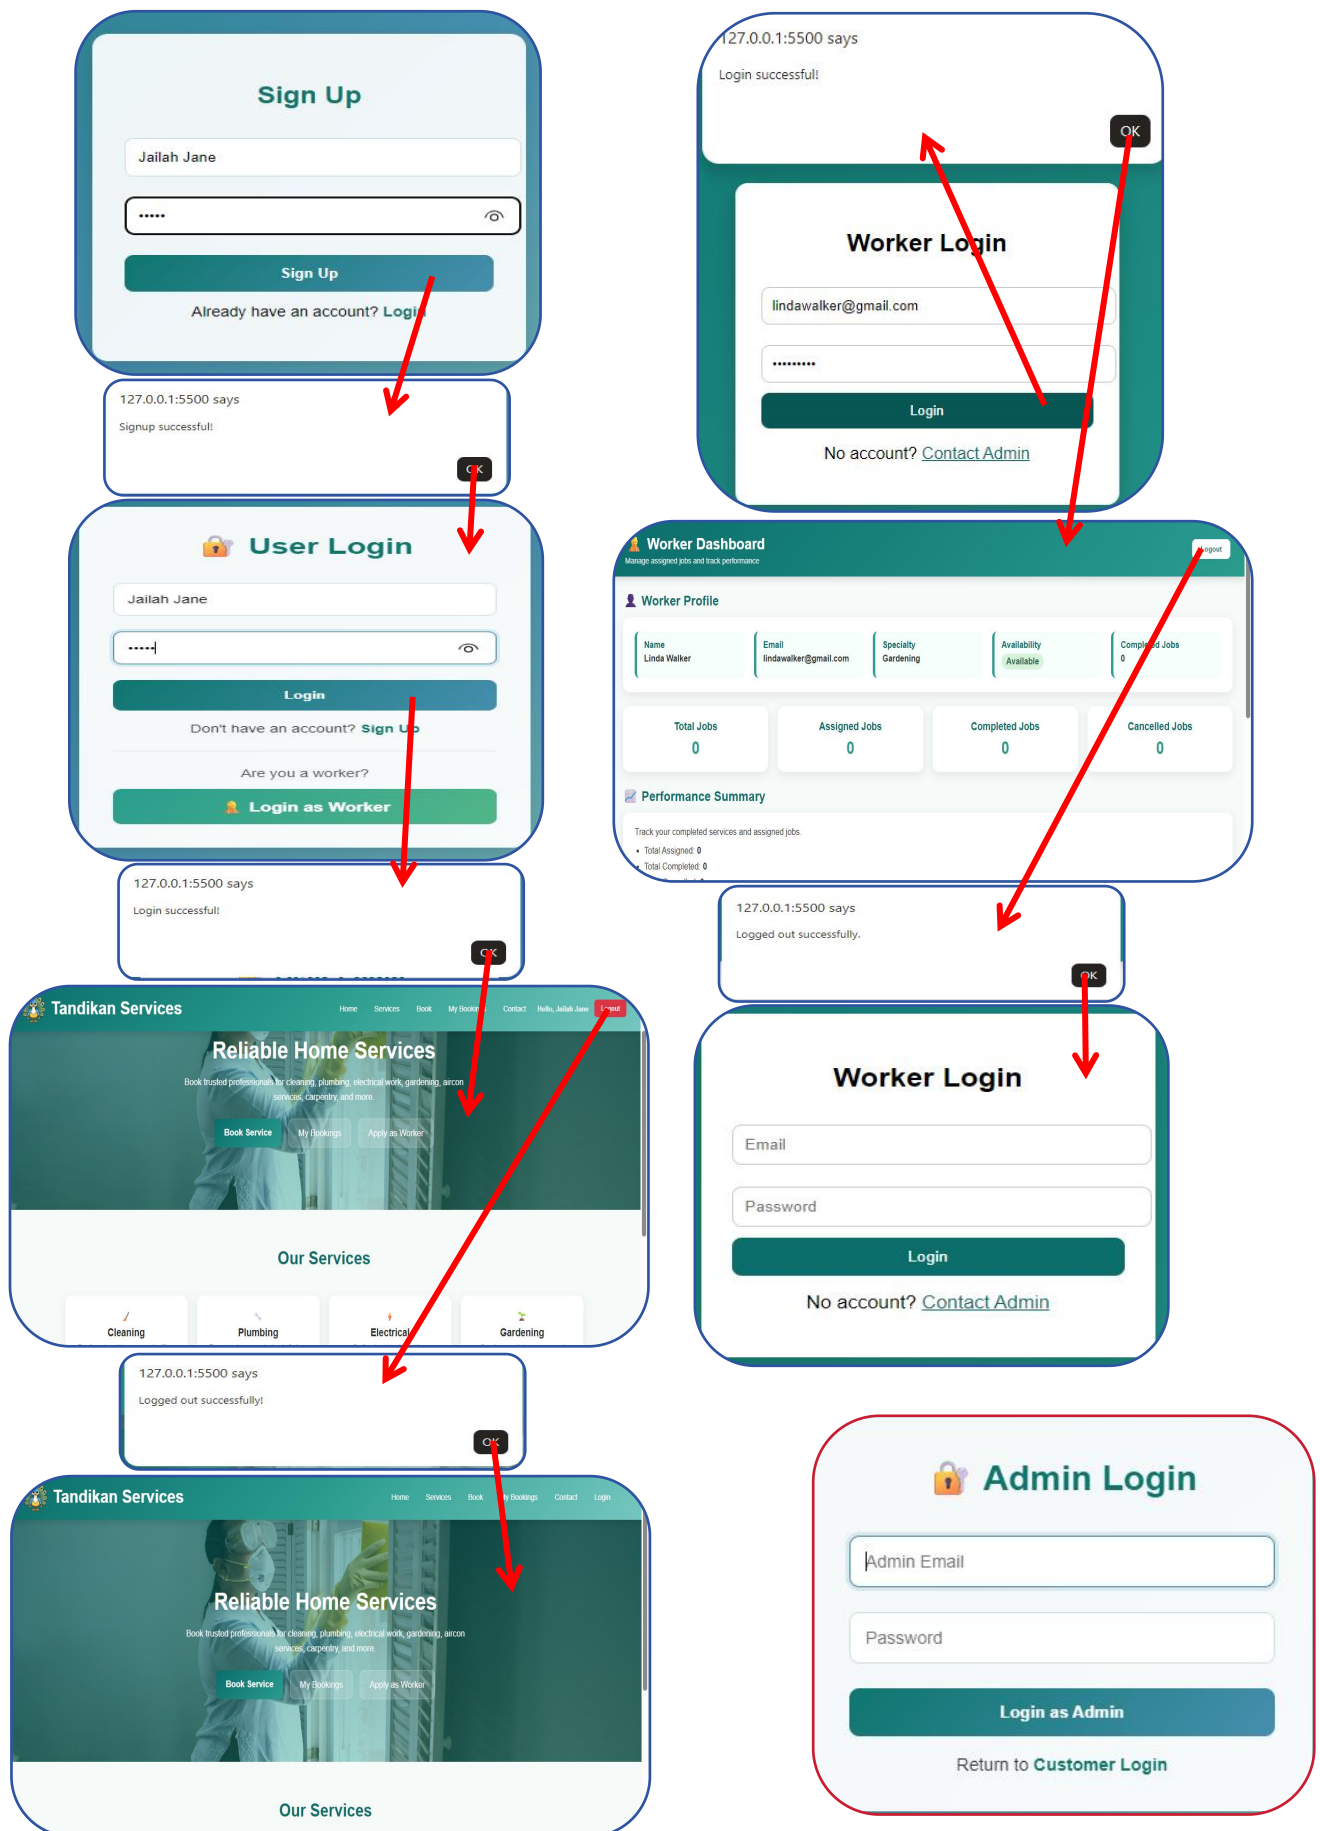

Figure 5: Authentication; Admin, Users & Workers.

Booking Module

Allows customers to request services.

Features:

- Service Selection
- Date and Time Scheduling
- Location Recording
- Payment Method Selection
- Booking Confirmation

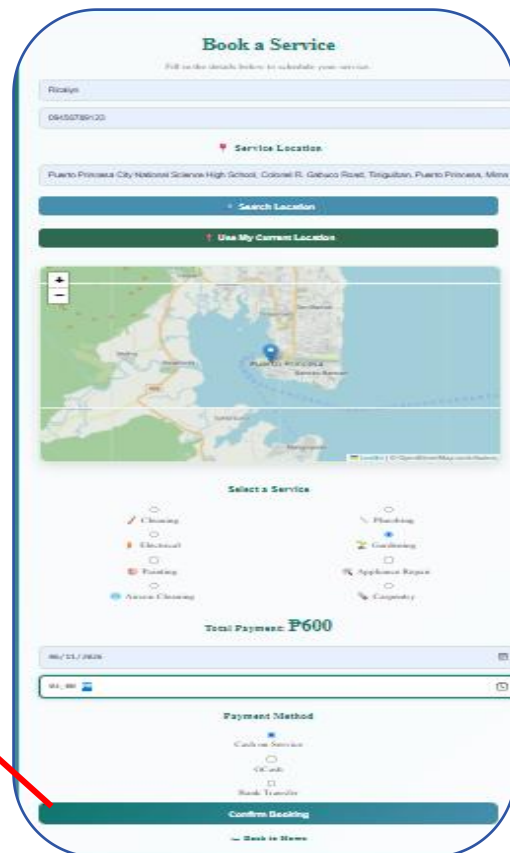

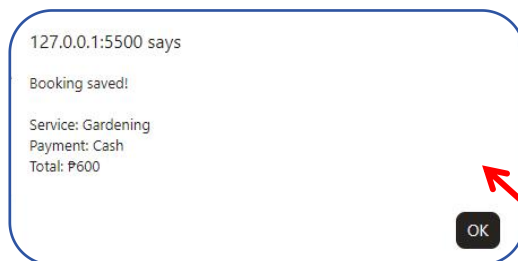

Figure 6: Booking Module.

Booking History Module

Allows customers to review previous and current bookings.

Features:

- Booking Records
- Payment Status Display
- Booking Status Display

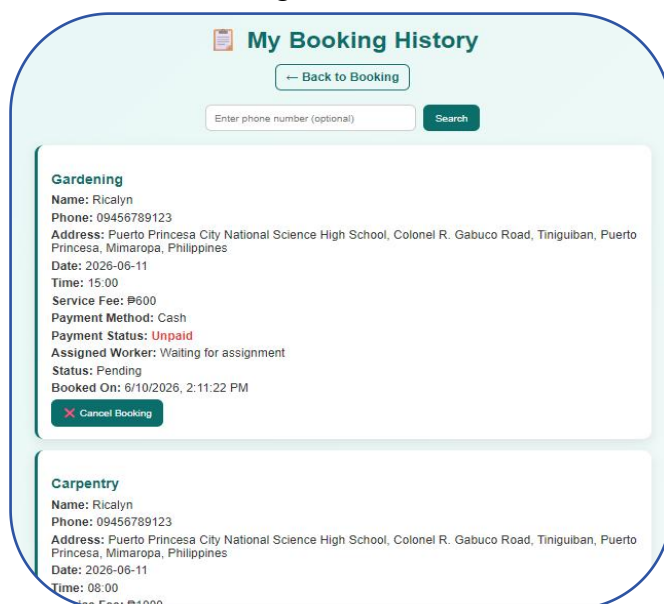

Figure 7: Booking History.

Worker Management Module

Allows administrators to manage workers.

Features:

- Add Worker
- Edit Worker Information
- Delete Worker
- Update Availability
- Search Workers

- Map/
- assets/

The project is organized into modules to separate system functionalities and improve maintainability.

10. System Workflow

Customer Workflow

1. Register Account
2. Login
3. Select Service
4. Complete Booking Form
5. Submit Booking
6. View Booking History

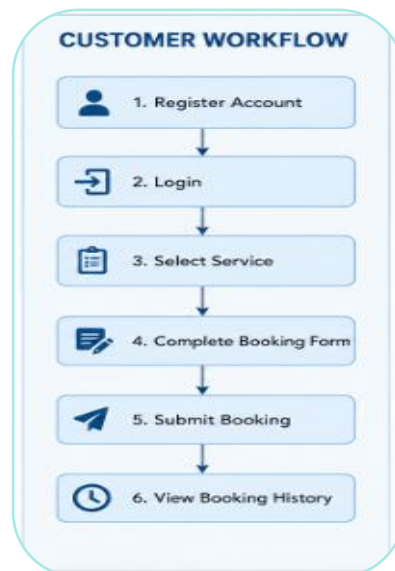

Figure 11: Customer Workflow.

Worker Workflow

1. Submit Worker Application
2. Wait for Approval
3. Login to Worker Portal
4. View Assigned Jobs
5. Complete Assigned Jobs

Figure 12: Worker Workflow.

Administrator Workflow

1. Login to Admin Dashboard
2. Review Worker Applications
3. Approve Workers
4. Assign Workers to Bookings
5. Monitor Service Operations

Figure 13: Admin Workflow.

11. Testing Summary

The system was tested for:

Functional Testing

- ✓ User Registration
- ✓ User Login
- ✓ Worker Login
- ✓ Booking Creation
- ✓ Booking History Display
- ✓ Worker Assignment
- ✓ Worker Approval
- ✓ Job Completion
- ✓ Status Updates
- ✓ Logout Functionality

Result

All core functionalities operated successfully and produced the expected output.

12. Limitations

The current version uses LocalStorage as the data storage mechanism.

Limitations include:

- Data is stored locally in the browser.
- No cloud synchronization.
- No online payment integration.
- No email notification system.
- Limited security compared to database-driven systems.

13. Future Enhancements

Future versions may include:

- Database Integration
- User Profile Management
- Payment Gateway Integration
- Email Notifications
- SMS Notifications
- Customer Ratings and Reviews
- Analytics Dashboard
- Mobile Application Version

14. Conclusion

The Tandikan Services Booking System successfully provides a centralized platform for managing service bookings, worker assignments, and administrative operations. The system improves service coordination and simplifies the interaction between customers, workers, and administrators.

The project demonstrates the practical application of web development technologies in creating an efficient booking and workforce management solution.
